

Our project is emojiify (Converting video to emoji). Everyone likes emojiify at this time because it is interesting. This why we have decided to do this project. It will have an effect on the video and live chat video. Emojiify is a ways to indicate nonverbal cues. So the end product of this project will be the emojiify an effect on the video and live chat video.

I think that it is necessary with respect to Bangladesh or World because now this time we have become much more technology dependent, this is why we often talk in video calls but there are many who do not want to see the face of directly or not feel comfortable. For this reason these cues have become an essential part of online chatting, product review, brand emotion, and many more. So this project will help a lot of them.

There is a lot of work to be done in this project. By doing this project I will be able to learn many new things. But I am more interested on the computer vision part and data analysis in this project because this kind of work is new for me. And I want to learn these things well. So I will contribute to these part in this project.

The work of this project is very new to me. In order to do this project, I have to learn a lot of new things and needs some research. And I want to learn all the work and things well. I think I need 76 hours more or less to complete this project well.
